

European Union - Waste Electrical and Electronic Equipment (WEEE) and Dialogic Products

We are confident that your Dialogic product will provide you with many years of reliable service. Ultimately, a time may come when the product will no longer meet your needs or will become uneconomical to repair. It is at that stage that we ask for your co-operation in recycling this product in the spirit of the WEEE Directive.

While Dialogic has taken great care to minimize the environmental burden of this product by careful design and manufacturing, we ask you to help us to further minimize the environmental burden of this product by recycling it.

Please do not dispose of this product through municipal or general waste systems because it contains materials that can be economically recycled. Like all electrical and electronic equipment, including televisions and computers, it may contain small amounts of materials which could lead to environmental damage. To minimize any environmental damage, we ask you to have this product recycled by:

- **bringing it to the recycling collection point in your company**
- **handing it into the store where you are purchasing the replacement**
- **delivering it to a local bring-center (collection-point) in your area**

No charge can be imposed on you for this recycling service in the European Union. We thank you in advance for your cooperation and for working with Dialogic to protect our environment.

While this notice applies to the European Union, many other countries and municipalities have set-up recycling systems for waste electrical and electronic equipment or 'ewaste'. Please contact your local municipal authority or city council for information on facilities which may be in place in your area.
